

ENGIE's Services entities, at the heart of Europe

The ENGIE Services entities have been serving clients in Belgium for over 65 years. With a workforce of almost 9,000 employees, the entities have become the undisputed market leader in providing technical solutions for the infrastructure, buildings, and industry sector as well as in the Oil & Gas markets and airports. In fact wherever their expertise can help to improve energy performance, sustainability and quality of life. To meet our clients' digital challenges the Services entities van ENGIE are also present across the entire data center value chain.

Agility Center
cutting-edge technology
supported by a clear vision

Our mission

Technical infrastructure layers, operational processes and general facility management demand equal attention in present-day data centers. Energy efficiency, cooling and data protection are just as important as keeping PCs, networks and applications up and running. As an integrated facility management partner, ENGIE Cofely is extremely well positioned to maintain a highly

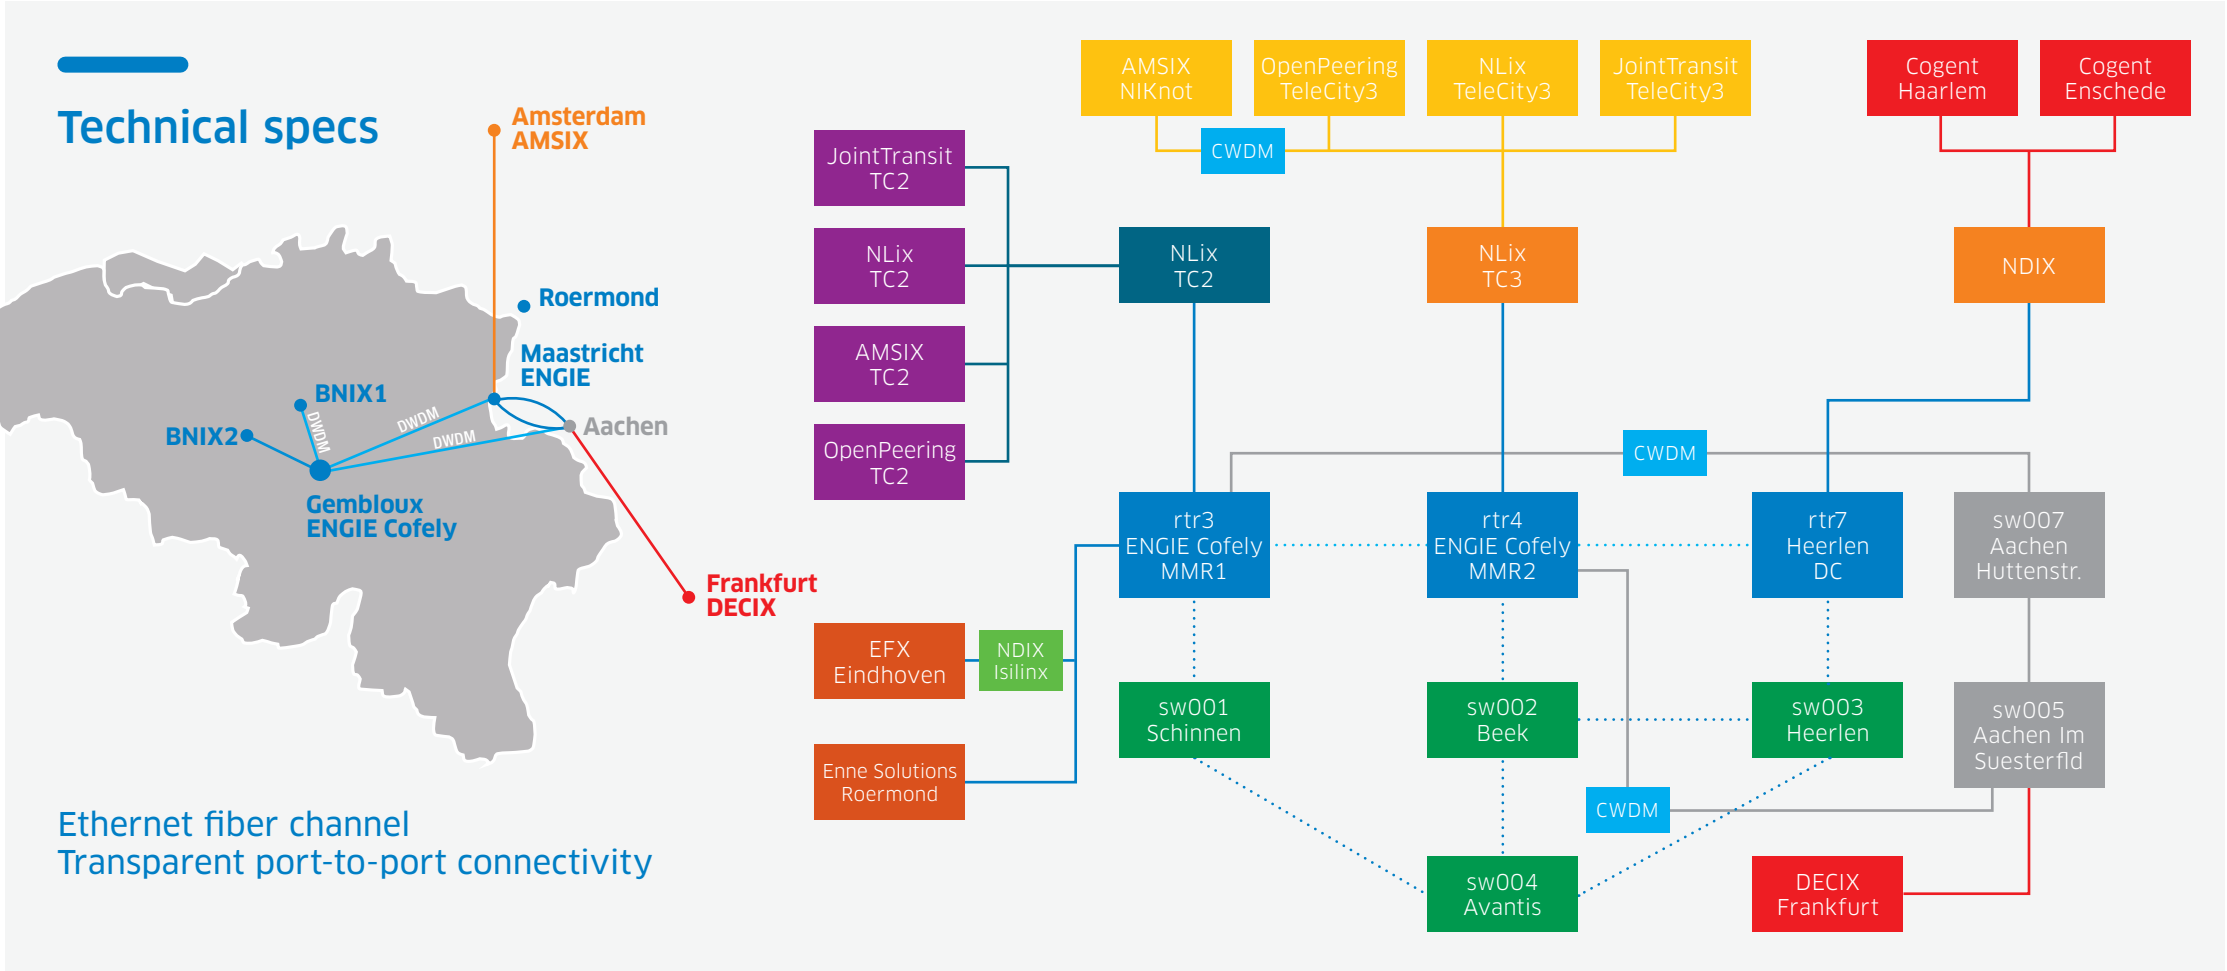

complex environment like the Agility Center. Our state-of-the-art data center and expertise ensure the reliability and agility you need to adapt to ever-changing delivery models. We provide the flexibility to scale up or down whenever required and the efficiency to limit energy consumption and environmental impact.

A private 2000 m² area in the Agility Center with a capacity up to 4 MW can be fully dedicated to your needs.

Our state-of-the-art data center offers the following technical advantages:

Surface area	Open peering with point-to-point connection
Energy	Multiple separate rooms offering a total of 1550 m ²
PUE	PUE = 1.25
Energy supply	3.5 MVA with extension to 25 MVA
Transformers	4* 1600 kVA and 4* 1000 kVA
Capacity	1000 W/m ² ready for 2000 W/m ² with HD zone
UPS systems	6* 600 kVA
Diesel gensets	4* 1600 kVA and 4* 1000 kVA
Fuel autonomy	Sufficient for 72 hrs of continuous operation
Cooling system	12 FRAU* with capacity of 200 kW each
Temperature range	Hot and cold aisle concept
Humidity	21°C (Cold aisle) - 36°C (Hot aisle)
Connectivity	35 % - 70 % RH
External network	Multiple redundant dark fiber connections
Internal network	2 meet-me-rooms with 2 separate distribution loops
Security	
Fire protection	VESDA system with inert gas
Security system	Supervised camera circuits with motion detection
Fencing	Central rooms individually badge controlled with biometric reading
Alarms	Intruder detection system with IF camera controlled
Guarding	24 x 7 x 365 monitored alarm systems
Environment	24/7 manned security
Energy	Green electricity combined with photovoltaic panels
Cooling	CO ₂ reduction of 2500 Tns/yr
Waste	*FRAU: FRee cooling Autonomous Unit
	Waste collection and treatment
	Sorting and recycling waste to turn it into a resource

Your benefits

Unmatched availability and service

The Agility Center is entirely built, managed and maintained by ENGIE Cofely. Thanks to our local presence, we have all the necessary experts and materials at hand. You can count on 24/7 availability, a pragmatic approach and an excellent customer relationship.

One stop, many resources

This data center is truly the sum of our expertise. Leveraging the know-how of five companies, we offer services in every single phase of a data center project. Whether it's design, installation, management or maintenance: you always have a single point of contact.

Technical and financial flexibility

Both technically and financially, ENGIE Cofely offers scalable solutions. Not only can the Agility Center's specs be adapted to suit your needs; we also offer flexible financial options. We can start in an opex model and move to a capex model whenever you desire.

We make it your way

We are able to deliver an operational, fully customized and state-of-the-art data center 12-18 months after your order. Using the public-private partnership model, we can operate the data center for a given duration.
